

Our new BP 6200 lets you move along at an amazing clip.

Feel the difference.

You're cutting through thick, dense wood like it's butter and this pruner is a weightless extension of your hand. You're aware of its keen edge and smooth cutting performance. Its extra strength and stability on larger cuts. Superb fit and balance. And comfort like you've never felt before.

Every Corona BP 6200 Series pruner is more comfortable because of its ergonomic design with 45° angle cutting head. Cushioning shock absorbing bumper. And strong, broad-shouldered, co-molded Corobond handles that provide a secure grip with less pressure, greatly relieving hand and wrist fatigue.

A larger bearing surface and self-aligning pivot bolt with patented, hi-torque all-steel locking nut provide superior stability and greatly reduced force-to-cut.

And, as with all our top-of-the-line professional pruners, the BP 6200 Series features a forged hook for extra strength and Coronium™ steel forged alloy blades that are fully heat treated to hold a precision edge after resharping.

The **BP 6200 Series** professional bypass hand pruner by Corona. Take it for a test drive and feel the difference for yourself. Available in 1/2", 3/4" and 1" cutting diameters.

The BP 6200 Series Bypass Pruners are covered under the Corona two-week, money-back Test Drive guarantee. Circle No. 145 on Reader Inquiry Card
