

The most economical way to eliminate Poa annua!

No. 4 green, Prairie Dunes Country Club, Hutchinson, Kansas, P. Stan George, C.G.C.S.

There are plenty of products that provide preemergent control of crabgrass, goosegrass, and other unwanted grass weeds. But if your problem is *Poa annua* on putting greens, your choice is limited.

Proven weed control and a high level of turfgrass tolerance have made Bensumec 4LF the most widely trusted pre-emergent herbicide for greens and other highly maintained turf areas. It is also compatible for tank-mixing with many other turf products.

And compared to some of the newer *Poa* control programs, Bensumec 4LF is very economical.

Always read and follow instructions on the product container.

Consider these advantages:

- prevents *Poa annua*, crabgrass, goosegrass and other unsightly grasses and broadleaf weeds
- economical compared to other *Poa* control programs
- season long staying power
- high turfgrass tolerance
- most efficacious in soil with low organic content — perfect for sand based greens
- may be applied during the dormant season or growth period
- can be tank mixed with most turf care products including liquid fertilizer

PRE-SAN® Granulars, available in 7% and 12.5% formulations, also provide the consistent performance and margin of turfgrass safety. Both Bensumec™ and Pre-San® contain Betasan®.

Excellent control of *Poa annua* plus crabgrass and other weeds.

Stuart Cagle, C.G.C.S., Old Oakland Golf Course Indianapolis, IN

"We've used Bensumec 4LF for four years making split applications in the spring, and sometimes a fall application, too. I am more comfortable with this premerge than with PGRs for our greens and tees. And we've had excellent control of *Poa* as well as crabgrass and other weeds."
