We don't want no stinking weeds! MMMM

We hear you. We've got a solution for all your problems.

CHASER

KLEENUP PRO

CHASER ULTRA is three way combination of MCPA, Clopyralid and 2,4-DP, which is aimed at providing effective control in both cool and warm seasons. It is an excellent choice for broadleaf weed control and has demonstrated exceptional control on white clover, dandelion and plantain.

CHASER is the original ester formulation of 2,4-D and triclopyr that controls most broadleaf weeds, including hard-to-kill weeds that other comparable chemistires do not control. It has shown excellent turf safety and mixes well with most pesticides and fertilizers.

CHASER 2 has all the power of Chaser with the safety of a warm weather amine formulation. It can be used on ornamental turf such as lawns, golf courses (fairways, aprons, tees and roughs), parks, highways, cemeteries and similar non-crop areas; and sod farms.

KLEENUP PRO is the easy-to-use and proven 41% glyphosate solution for keeping landscaped areas clear of weeds and unwanted grasses and for spot controlling weeds in hard to reach places. The long-lasting systemic control prevents regrowth and has virtually no residual activity.

For more information, contact your local UHS representative www.uhsonline.com

Circle No. 119

The basic role of an adjuvant is one of two tracks, to either help chemicals penetrate into the plant or to adhere to the leaf surface.

If your goal is systemic action, no other non-ionic surfactant or penetrant product is superior to **LI-700** and **Liberate**.

If you desire to enhance the effectiveness of contact products, look no further than **Tactic**.

All of these high-performance, premium adjuvants have been tested to ensure plant safety and used effectively around the world.

LI-700

- Maximizes penetration through waxy layer of foliage while maintaining integrity of the plant's protective system
- Acidifying feature reduces pH of spray solutions
- Unique chemistry provides excellent drift control
- Allows more uniform coverage and even spreading

LIBERATE

- Same penetrating and low-phytotoxicity benefits of LI-700
- pH neutral with a "CAUTION" label for maximum safety
- Low-odor formulation also provides superior drift control

TACTIC

- · High quality sticking agent maximizes residual activity
- Organosilicone super-wetter gives total coverage
- · Resists wash-off by dew, rain or irrigation

Spreader buying tips

"When choosing a spreader, look for a tire pattern that isn't aggressive," advises Bob Oelke, Agronomist with Dakota Peat & Equipment, Grand Forks, ND.

Nothing messes up a lawn, sports field or golf course quicker than ruts from a spreader. Tight turns can tear turf, and too much downward pressure will leave noticeable lines in all but the toughest turf.

"I like to see a tire pressure of one-half pound per square inch or less," Oelke continues. As an agronomist, he realizes that the ideal isn't always possible. However, when buying a drivable spreader, a landscape manager should check the tire footprint. Generally, the bigger the tire on a spreader, the more it spreads the weight.

Oelke has some other practical buying tips. "Look for a versatile, multi-tasking unit that will hold up," he says. A good unit will top-dress lawns, spread seed on sports fields, or put a uniform coating of compost over a park.

He says to get a product demonstration at your facility or on a typical lawn.

Another good idea: Be sure the unit you're buying uses standard, off-the-shelf components. Hoses, bearings and other replaceable parts shouldn't be machine-specific.

Get gone geese

Veteran grounds manager hopes his latest strategy no wild goose chase

BY RON HALL / EDITOR-IN-CHIEF

ama goose flew in low with murder in her eyes. Her flapping, squawking attack sent coworker Larry Aylward sprawling to

the ground, his hands protecting his head.

Larry is Editor of *Golfdom* magazine, sister publication of *Landscape Management*. Our magazines are produced at the Advanstar Communications site in a suburban community 12 miles southwest of Cleveland, OH. Grounds Manager Tom Sprague is taking steps to prevent this from happening again. He applied a product to the site's turfgrass to discourage geese from feeding. They're stubborn creatures, however, and the threat, although lessened, remains. One mother goose is nesting near a sidewalk, and we're giving her lots of room.

ALONG THIS SIDE WALK

PLEASE USE EMPLOYEE

ENTRANCE FOR YOUR

THANK YOU

SAFETY

Although we see far fewer geese at our site this spring, we remain on high alert.

Sprague attributes fewer geese on our property to application of the product FlightControl Plus. He's hopeful it continues to discourage the geese.

The problem: messy honkers

Our editorial offices are situated on seven acres, about half being asphalt parking lot and the other half turfgrass and a pair of quarter-acre ponds.

Sprague has tried many strategies to discourage the geese from hanging around our property. The geese always see through these ruses and return to foul our sidewalks.

By mid-summer each year, as many as 20 to 30 geese are swaggering around our headquarters like they own it.

The solution: "antifeedant" product

Sprague applied the FlightControl Plus full strength in mid March (one gallon per acre). He obtained the product from the nearby LESCO store and put it down with a 50-gallon sprayer pulled behind a Steiner tractor. He expects the product to remain on the turfgrass at least until he mows.

The product is described as an "anti-feedant." After geese ingest turfgrass treated with the product, they go elsewhere to feed. It reportedly causes an unpleasant but harmless reaction in the guts of geese. Geese can see the compound in the ultraviolet light spectrum and will fly over and avoid treated sites.

As of the third week of April, there have been just the occasional goose sighting on our property. Sprague feels that it will take several treatments this season to convince the geese to stay away.

For updates on our experiences, e-mail us at <u>tsprague@advanstar.com</u> or <u>rhall@advanstar.com</u>. LM

products TECH CENTER

Watch savings pop up

Tests have shown that Valvette Systems' Little-Valve products contribute to significant savings in both labor and water when heading up new jobs or maintaining existing sprinkler heads. LittleValve sprinkler parts and under-the-head fittings provide individual on-off/flow control for pop-up spray heads and above-grade sprinklers of any type. The savings are due to 1) the ability to shut down each sprinkler for nozzle or head cleaning or replacement while system is running, 2) the full control the technician has over both the amount of water exiting each sprinkler and the amount being flushed during line and head cleaning operations, 3) the fact that popup risers stay in the "up" position with the nozzle removed while the water is running, and 4) the LittleValve replacement pop-up risers emit 13% to 16% less water than ordinary risers. For more information contact Valvette Systems at 818/887-1866 / circle no. 250

Flex some muscle

With seven-gauge steel, no welds and increased airflow, John Deere's 72-in. 7-Iron V-

72-in. 7-Iron V-Flex mower deck answers landscapers' demand for a rotary mowing deck that provides superior performance on flat and uneven terrain. A rear wheel kit offers 1- to 5-in. heights, while a

rear roller kit offers 1- to 4-in. heights, adjustable in 1/4-in. increments. The V-flex deck is available for use with the 1445, 1545 and 1565 front mowers. A 14.5-gal. fuel tank allows for all-day mowing.

Go with the flow

NIBCO is now offering a new manual angle valve for use as a drain valve or isolation valve on both the lateral and mainline piping system for general irrigation markets. Features include a dezincification resistant ASTM B 584 bronze body, a high flow rate (typical CV 78), bronze cross handle for ease of operation, integral seat and renewable EPDM disc. The valve is currently only available in two in.

Straight stripes

The Pioneer Brite Striper 5000 riding line striper can stripe more than 100 football fields with one battery charge. Compressed air technology pro-

vides straight lines. Two 12-gal. steel tanks are controlled by a switch near the seat. A hydraulic spray arm sprays sharp, straight lines in front, or can be moved to the side for crisp circles.
