**NEW VANGUARD™ 810cc ENGINES DELIVER EXACTLY
WHAT YOU NEED TO TACKLE ANY CUTTING CHALLENGE.**

In engineering our new line of commercial-grade engines, we listened to landscape professionals across the country. We pored over the feedback and crunched the numbers again and again. We built prototypes and conducted test after test. When the dust settled, we arrived at the ideal displacement for zero-turn mowers in the 24-26 gross horsepower* range: 810cc. All the torque you'll ever need—in a compact engine designed to run cooler and thrive in extreme conditions. Bar raised. Game changed.

See how the 810cc engine can power your business at 810optimum.com.

* All power levels are stated gross horsepower at 3,600 RPM per SAE J1940 as rated by Briggs & Stratton.
